

AVITUS KWS

Early: FAO 160/170

SEEDING
THE FUTURE
SINCE 1866

Forage performance to reign supreme!

Characteristics / Quality

- Unrivalled yield for its maturity segment – AVITUS KWS offers DM yields – over 19t/ha DM on projected data for the NIAB 2019 List
- 1st place for yield potential, starch and ME (MJ/Kg) of all modern hybrids
- DM Yield 2016: [19.4 t/ha DM NIAB], KWS LP250; [19.7 t/ha DM]
- Approx. 3 days earlier to harvest than AMBITION in KWS screening trials*
- Top early vigour (2016: 8.6)
- Very high starch (2016: 35.5%) and ME content (2016: 11.6 MJ/Kg)
- Full cob sheath coverage
- Moderate stay green for faster ripening

Data source(s): KWS LP250 (*2015 + *2016) & FERA NL Trials for Forage Maize – All sites (2016)

“ AVITUS KWS pushes the boundaries of current early forage maize breeding for all livestock farmers.

Breeder's view

With the early release and launch from KWS' screening programme, AVITUS KWS is a new benchmark for early maize breeding – AVITUS KWS is grown in the UK, Denmark, Netherlands and Northern France, for livestock farmers relying on early maturity maize silage.
